

WE'VE GOT YOUR CRANIUM COVERED

CHECK HERE FOR MORE!

Whatever skullduggery abounds on the job, we've got your cranium covered with Skullerz® Hard Hats and Bump Caps, all engineered with intense worker feedback for uncompromising comfort and protection in a hard knock life.

WHAT'S THE DIFFERENCE BETWEEN HARD HATS/SAFETY HELMETS AND BUMP CAPS?

HARD HATS + SAFETY HELMETS

Object Generated Impacts aka "stuff hitting you"

Hard hats are designed to protect from "object-generated impact", which involves an object falling onto the worker, or a worker could be hit by a flying object.

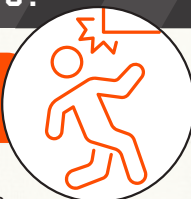

VS.

BUMP CAPS

Worker Generated Impacts aka "you hitting stuff"

Bump caps are designed to protect from "worker-generated impact", which involves a person striking a stationary object or structure.

WHAT ARE THE HEAD PROTECTION STANDARDS?

HARD HATS

ANSI/ISEA Z89.1-2014

Standard for Industrial Head Protection

The ANSI/ISEA Z89.1 standard establishes performance requirements for hard hats + safety helmets, classified by Type (Type 1: top impact, Type 2: top + side impact) and Class (G: 2,000V, E: 20,000V, C: no electrical protection).

BUMP CAPS

ANSI/ISEA 100-2024

Industrial Bump Cap Standard

The ANSI/ISEA 100-2024 standard establishes performance requirements for bump caps, classifying them into Level 1 (basic protection from stationary objects) and Level 2 (higher impact resistance) while ensuring benchmarks for impact protection, comfort and durability for environments where traditional hard hats aren't required.

DID YOU KNOW?

THERE ARE 78K HEAD INJURIES PER YEAR RESULTING IN AT LEAST ONE DAY AWAY FROM WORK...

CONSTRUCTION - 7.2%
SERVICE WORKERS* - 22.1%
TRANSPORTATION* - 20.6%

*NOT TYPICALLY WEARING HARD HATS

(*BLI)

WHAT HEAD PROTECTION OPTIONS ARE AVAILABLE FROM ERGODYNE?

BUMP CAPS

Head injuries don't just happen in hard hat zones. From auto shops to crawl spaces, nasty cuts, scrapes and ER bill\$\$\$ abound.
