HAND PROTECTION HANDBOOK

STANDARDS, TECHNOLOGY AND OUR COMPLETE GLOVE LINEUP

NO EXCUSES

TOO HOT? TOO BULKY? NO GRIP?
HEY, WE GET IT. BUT GOING COMMANDO AIN'T THE WAY, BABY.

Before you go bare knuckle, consider *70% of hand injuries happen because gloves aren't worn. The other 30%? Wearing the wrong gloves for the job. (*Bureau of Labor Statistics)

That's why we've designed our gloves with one crazy goal in mind: to get worn. Period. You might even find they help you do the job better. So now there's no excuse to go glove-less.

Too hot? Exclusive cut-resistant yarn with moisture-wicking and cooling fibers

Too bulky? True feel and "thread the needle" precision for nimble handling

No grip? Leading-edge dip technologies that outperform the second best by a long shot

To find the fix for all your glove gripes, just let your fingers do the walkin'...

EN 388 EUROPEAN STANDARD

ANSI/ISEA 105

ANSI/ISEA 105 AMERICAN NATIONAL STANDARD

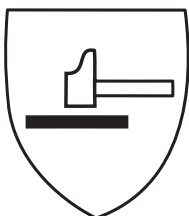

LABELING 101: WHAT DOES IT ALL MEAN?

EN 388

Most Ergodyne Gloves are tested to EN 388 which measures and scores abrasion, cut, tear and puncture risks. Additionally, enhanced cut protection gloves are tested to ISO 13977 cut resistance and impact-resistant gloves are tested for impact protection. The level at which the glove passes each risk is indicated in the EN 388 testing badge found on the glove cuff.

- ISO Cut Resistance (A-I; X = Not tested)
- Impact Protection (P = PASS)

ANSI/ISEA 105

All Ergodyne Gloves are also tested to ANSI/ISEA 105. This standard measures and scores cut, abrasion and puncture resistance. As with EN 388, the level at which the glove passes each risk is indicated in the ANSI/ISEA 105 badge found on the glove cuff.

A PATTERN OF PROGRESS. MEET TRIHEX™

The new shape of impact protection... for now.

For over 40 years, we've treated today's breakthrough as tomorrow's benchmark.

And with an ingenious geometry that flexes, bends and moves in ways workers never thought possible from an impact glove, TriHex has them wondering how we top it.

Us, too.

THE WEIRDEST WORK GLOVE PROTOTYPE YOU'VE EVER SEEN.

TRIHEX STARTED AS AN
EXPERIMENT IN KNEE PAD DESIGN

Turns out the same flexible geometry that helped workers kneel, crawl and move naturally made the perfect foundation for a new generation of gotta-try-them-to-believe-them impact gloves.

ANTI-VIBRATION

When your equipment kicks like a mule, kick back. Besides meeting ANSI/ISEA 105, S2.73/ISO 10819 standards, Ergodyne Anti-Vibration Gloves employ AVC™ (Advanced Vibration Control) technology in both full palms and key areas for maximum hand protection against vibration, shock and palm impact. They just might be the best thing to happen to bad vibrations since Sid Vicious punched his ticket to punk rock purgatory.
